

Modifications are currently needed to the module for radiation tolerance

ATSAMD21G18 32-bit ARM Microprocessor  
VDD Range: 1.62-3.63V

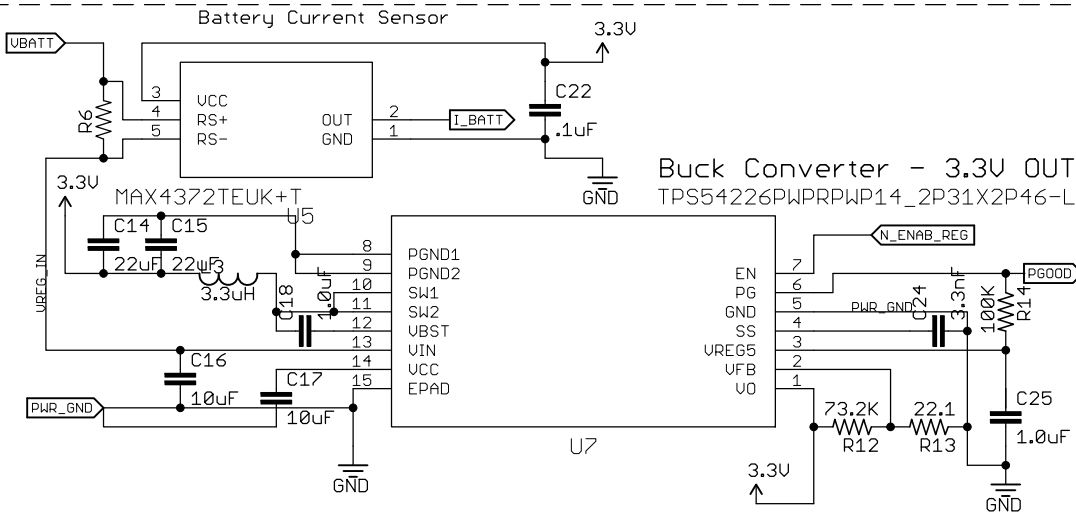

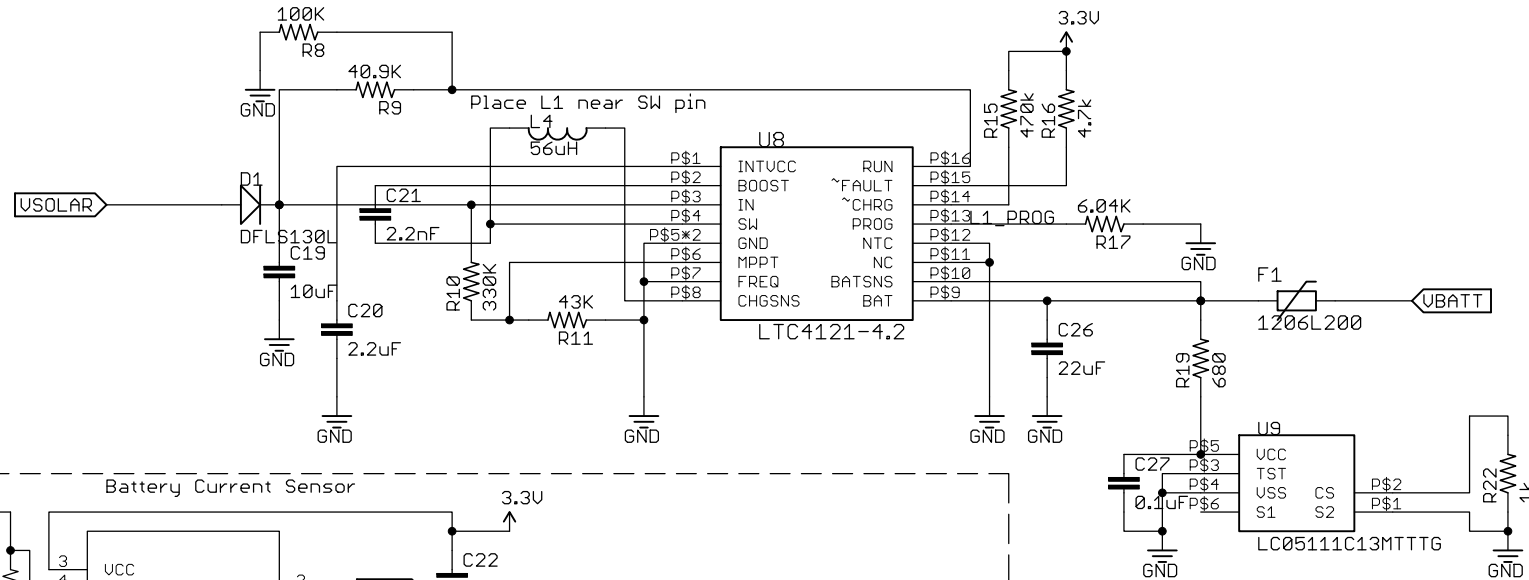

Stretch Goals:  
Ultracap Power Supply  
Max GFET sensor

Sheet: 1/4

Run pulled up to ensure charging on startup  
 NTC tied to GND b/c no NTC sensor  
 FREQ tied to GND to select 750kHz switching frequency  
 LTC4121 can handle several amps of inrush current upon battery connection  
 NC tied to ground prevent charge buildup, approved by LT.  
 R28 & R29 set  $V_{mp}=9V$   
 Ven threshold is 2.45V. Resistor divider sets RUN high when Solar Panel Voltage is  $\geq 6V$ .

The schematic diagram shows the module connections for the U11 and S1216V8 components. The U11 component has pins 13-17 connected to GND, pins 18-24 connected to 3.3V, and pins 1-7 connected to GND. The S1216V8 component has pins 12-17 connected to GND, pins 1-7 connected to 3.3V, and pins 1-7 connected to GND. The module also includes a 3.3V regulator with a 10K resistor and a 1P1S component.
